Anticipatory Action Framework

Philippines – Tropical Cyclones

As of 03 October 2025

Approved by the RC on 07 October 2025

Endorsed by the ERC on 19 October 2025

Table of Contents

Executive Summary

1. Introduction
2. Forecasts, Scenarios, and Triggers
3. Anticipatory Action Plan
4. Other AA initiatives
5. Government AA
6. Annex

Executive Summary

The humanitarian sector is scaling up anticipatory action (AA), enabling proactive mobilization of resources to get ahead of predictable climate-related shocks and disease outbreaks through robust forecasting (triggers), pre-agreed activities, and pre-arranged funding. The objective of this AA framework is to mitigate, and to a certain extent prevent, the severe impact of typhoons on people's homes and livelihoods, while building on government's mandatory pre-emptive evacuation procedures that save lives. With this intervention, the most at-risk communities will have better financial resources to prepare prior to landfall.

This framework outlines an approach to a collective anticipatory action delivered at scale as an innovative attempt to scale-up typhoon response in the Philippines. The document includes details about the forecasting trigger (the Model), the pre-agreed action plans (the Delivery) and the pre-arranged financing (the Money). An investment will be made in documenting evidence of the impact of AA (the Learning).

The financing

The Emergency Relief Coordinator (ERC) has pre-arranged up to US\$ 6 million from the Central Emergency Response Fund (CERF) to support the present framework. This funding is complemented by an additional \$4 million from other partners, including UN agencies, NGOs and the Red Cross. The funding will allow partners to provide assistance in Food Security and Agriculture, Camp Coordination and Camp Management (CCCM) and Emergency Shelter, Gender Based Violence, Water Sanitation and Hygiene (WASH), Sexual and Reproductive Health, Child Protection, Nutrition and Education.

The trigger

The financing and activities included in this framework will be triggered by any of the following: readiness trigger, action trigger or observational trigger. If the readiness and/or action triggers are reached, the framework is immediately activated. If only the observational trigger, activation has to be confirmed on/or before landfall or up to 72 hours before landfall of a super typhoon.

- **Readiness Trigger:** 3-7 days prior to forecast landfall (Return Period: 1 in 5.7 years)
 - Tropical Cyclone (TC) with potential to reach greater than 177 km/h maximum 10-minute sustained wind speed (200 km/h 1-minute sustained wind speed) to focus on stronger typhoons.
 - Projected to directly impact areas within Region 5, 8 and/or 13 (Caraga).
- **Activation Trigger:** on or before 72 hours (3 days) prior to forecast landfall (Return Period: 1 in 3.4 years)
 - Use a **separate regional threshold matrix** with a return period of more than three years for Regions V, VIII, and Caraga. This will be used to compare against 510 model outputs at 72 hours before landfall, in order to account for varying regional vulnerabilities.
 - **Threshold is reached and the anticipatory action framework is activated if on or before 72 hours (3 days) prior to landfall (or sooner)** the predicted number

of houses to be totally damaged fall within the range of the regional threshold matrix.

- **Readiness activation with action activation**
 - The readiness and action activation can be triggered at the same time with a cut-off of 72 hours prior to the tropical cyclones forecast landfall.
 - Activation trigger can be reached and activated if the estimates on the total number of destroyed houses reaches the regional thresholds even without readiness trigger activation on/or before 72 hours before the tropical cyclones forecast landfall.
- **Observational Triggers:** at landfall or up to 72 hours before landfall of a super typhoon (185 km/h 10 mins sustained wind speed) (Return Period: 1 in 4.5 years)
 - If the anticipatory action triggers are not met on/before 72 hours prior to landfall, an observational trigger may be activated any time from that point up until landfall (0 to 72 hours before landfall). The classification for a tropical cyclone activation the observational trigger is a super typhoon on/before landfall with sustained wind speeds of 185 km/h or higher (10 min sustained windspeed), as reported by state weather bureau PAGASA.
 - OCHA to meet with OCD (if possible) and/or access PDRA scenario (if available) as soon as possible when a forecast of super typhoon is known. It can be before the 72hrs or at least 2 days before landfall.
 - Meeting of CERF AA agencies to reach a consensus based on available information should be held as soon as a super typhoon forecast becomes available. This can happen even before the 72-hour mark, but final decisions may need to wait until the AA threshold is either met or not met at the cutoff time of 72hrs before forecast landfall.
 - The group would have to consider that at least 50% of region will be within the damaging winds of super typhoon.

The action plan

The framework will enable agencies to implement both anticipatory and very early response activities in a coordinated manner. The pre-agreed actions will focus on the following core objectives:

- Communicating risks, engaging with communities, and early warning messaging: early warnings, community early actions and hygiene messaging.
- Providing in-kind assistance: including dignity and hygiene kits, modular tents, therapeutic nutrition, and water infrastructure rehabilitation.
- Provision of Select Types of Cash Assistance: This includes Multi-Purpose Cash Assistance (MPCA), sector-specific cash, and community cash grants, all aimed at strengthening household and community level preparedness based on self-identified priorities.

- Facilitating access to services: through mobile health clinics, maternal and mental health services, nutrition screening, water quality measures, referrals for protection needs, and facilitating access to safe storage sites of farm and fishing equipment.

Early response activities were selected based on experience from previous typhoon responses, operational capacity and the ability to deliver within a short period of time after the landfall of the typhoon. The implementation of the early response activities as part of this framework should not exceed 2-4 weeks after the onset of the disaster.

The learning

In 2024, OCHA partnered with Kobo (an international humanitarian non-profit organization) and researchers at the Harvard Humanitarian Initiative, to design an evaluation of the framework for Tropical Cyclones. The evaluation will measure the impact of select AA interventions on households and communities and inform learning from innovative pilots such as community cash grants and safe storage interventions. An after-action review was conducted to capture lessons learned from the successive tropical cyclones that occurred in 2024. Among the key updates were the refinement of regional triggers and the integration of observational triggers into the activation process. The review also incorporated insights from previous AA activations within the country, as well as experiences from other countries.

Communication activities

The Resident Coordinator, together with UN agencies and partners, agreed to place strong emphasis on communications for the upcoming AA framework. This includes a commitment to communicate as “One UN” – telling a unified story before, during, and after the response.

OCHA, in collaboration with the five participating UN agencies, is currently developing a communications plan for the OCHA AA framework for 2025. The plan will outline key messages, communication activities, and strategies for demonstrating the impact of anticipatory action.

Validity period

The present framework is valid for an initial period of two years following endorsement of the ERC (2025-2026). The 2025 framework will cover until January 2026 while the 2026 framework will cover until January 2027. This is to cover any unusual tropical cyclones formation in the month of January. For 2026, lessons learned from both the development and potential implementation of the framework will be applied to enhance and increase the scope of the current framework in collaboration with the AA Group.

1. Introduction

Tropical Cyclones in the Philippines

According to the World Risk Report 2025, the Philippines, ranked first among all countries for disaster risks, with index value of 46.56. In October-November 2024, the Philippines was hit with unprecedented [six successive tropical cyclones in a span of five weeks](#) that displaced more than 13 million people. Without action, climate change will impose substantial economic and human costs, affecting the poorest households the most. The World Bank estimates that the economic damages due to climate change in the Philippines could reach up to 7.6 per cent of GDP by 2030 and 13.6 per cent of GDP by 2040, clearly outpacing its growth.

The areas of the Philippines most frequently impacted by tropical cyclones are the provinces along the eastern seaboard, with cyclones making frequent landfall on the islands of Eastern Visayas, Bicol region, northern Luzon and eastern Mindanao. Approximately twenty tropical cyclones enter the Philippine Area of Responsibility (PAR) each year, an average of five of these are potentially destructive. Tropical cyclones with 118 to 220 km/h wind strength or higher have significant impact to lives and properties, including livelihoods and shelter. Tropical cyclones can hit the Philippines any time of the year, but the months of June to November are the most active and May the least active. Tropical cyclones normally move east to west across the country, heading north or northwest as they exit the PAR. Due to warm coastal waters of the Philippine Sea, exacerbated by climate change warming, rapid intensification ahead of landfall is common. Cyclones usually account for at least 30 per cent of annual rainfall in northern Philippines.

While the typhoon season usually starts in June, the more destructive tropical cyclones tend to hit the landmass later in the year, from September to December. Destructive tropical cyclones cause significant losses to agriculture and damages to infrastructure, particularly health facilities, schools, houses, markets, water facilities, communication, and have serious humanitarian consequences including loss of livelihoods, reduced income, disruption to continuing education and exacerbation of pre-crisis protection issues, such as GBV.

Embedding anticipatory action in the existing humanitarian coordination mechanisms

To prevent duplication of coordination platforms, HCT endorsed in May 2021 a review of the existing HCT Minimum Operations Protocol for Typhoon Response to account for anticipatory action interventions. Consequently, clusters adjusted their cluster-specific contingency plans and identified the most suitable early action interventions, relying on their technical expertise as well as by consulting with communities and considering various intersectional factors to ensure that anticipatory action is tailored to address the diverse needs of different community segments.

2. Forecasts, Scenarios, and Triggers

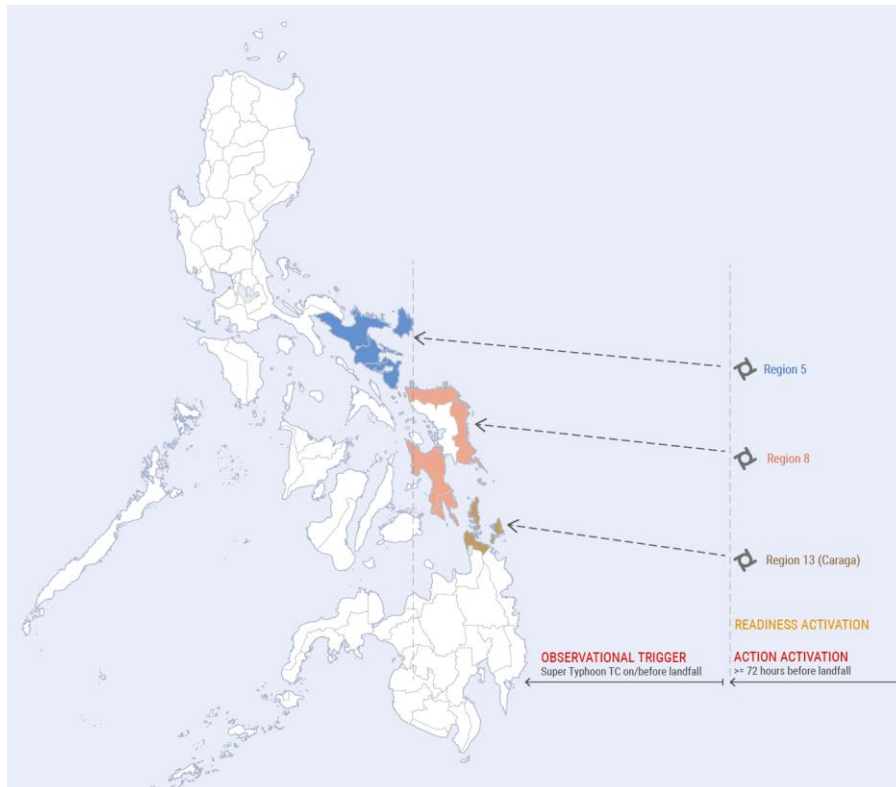

Forecasts

Several organizations have implemented forecast-based financing (FbF) activities in the Philippines for small-scale typhoon response where they developed and used forecast and trigger mechanisms. In 2021, OCHA and the Centre for Humanitarian Data facilitated discussion among these organizations to understand various forecasting models developed for tropical cyclone and to determine the most appropriate methodology to use for the CERF AA Pilot in the Philippines. After a thorough analysis, it was decided to use the IFRC/510 model. [The summary and report link.](#)

The Netherlands Red Cross 510 Initiative model was further revamped from a deterministic to a probabilistic impact forecast using ECMWF data. It is based on historical data that captures the relationship between impact (the houses totally damaged) and several explanatory variables (hazard, vulnerability and exposure). It uses typhoon forecast tracks, rainfall and wind speed to predict impact.

Scenarios

The 2025 framework will continue to cover Regions 5 (Bicol), 8 (Eastern Visayas), and 13 (Caraga). Unlike the 2023–2024 framework, which used scenario-based groupings—Scenario 1 covering Region 5 and the Samar Island provinces in Region 8, and Scenario 2 covering the Leyte Island provinces in Region 8 and Region 13—the 2025 activation areas will be disaggregated by region. This shift is due to the different vulnerabilities of the three regions as well as allowing for more targeted planning and response tailored to the specific needs and risk profiles of each region.

Triggers

The 2025 OCHA-facilitated AA framework activation is focused on stronger tropical cyclones, targeting high-impact hazards. This focus was informed by recent discussions in the AA TWG, as well as lessons learned from previous AA activations in the Philippines. The overall return period for the triggers in this framework is 1 in 3.5 years

1. Readiness trigger (pre-activation): 3-7 days prior to forecast landfall.

- Tropical Cyclone with potential to reach greater than 177 km/h maximum 10-minute sustained wind speed or 200 km/h maximum 1-minute sustained wind speed.
- Projected to directly impact areas within Region 5, 8 and 13 (Caraga).
- Only the region activated for readiness will be activated for anticipatory action.
- Activation for readiness cut-off is 72 hours (3 days) prior to forecasted landfall.
- If the forecasted tropical cyclone track is unclear on which region it will impact, OCHA in close coordination with CERF AA agency focal points will closely monitor the development and wait until a more definitive track is observed or until 3 days prior to forecast landfall. CERF AA agency focal points will provide a recommendation to the RC on which region to potentially activate based on all available information.
- Readiness trigger can be activated with action trigger at the same time on or before 72 hours before forecast landfall.

2. Activation trigger: on or before 72 hrs (3 days) prior to forecast landfall.

- As soon as ECMWF forecasts are available for a certain TC, OCHA Philippines together with OCHA's Centre for Humanitarian Data (OCHA CHD) will calculate the predicted total number of totally damaged buildings using the 510 model, produce an impact map, and update every 6-12 hours.
- **Threshold is reached and the OCHA-facilitated anticipatory action is activated if 72 hours (3 days) before landfall (or sooner)** the predicted number of houses to be totally damaged fall within the range of the matrix.

Region/Probability	95%	80%	70%	60%	50%
5	2,500	6,000	10,000	15,000	25,000
8	2,000	5,000	8,000	12,000	20,000
13 (Caraga)	3,000	7,500	12,000	18,000	30,000

- AA activation cutoff for the action trigger is 72 hours prior to forecast landfall.
- The region where the trigger threshold is reached at 72 hrs before landfall will be activated.
- If two or more regions reach the activation thresholds 72 hrs before landfall, the region with higher estimated number of destroyed houses will be activated. AA for more than 1 region cannot be activated at a time.

Separate regional thresholds were developed for Region 2 and 3, aligned with the three regions covered under the CERFAA Framework. Monitoring and generation of the estimates (region 2 and 3) will be included in the output of the OCHA/CHD model run. WFP will be activating AA using internal funding in Region 2 and Region 3 guided by the CERF AA Framework triggers and protocols.

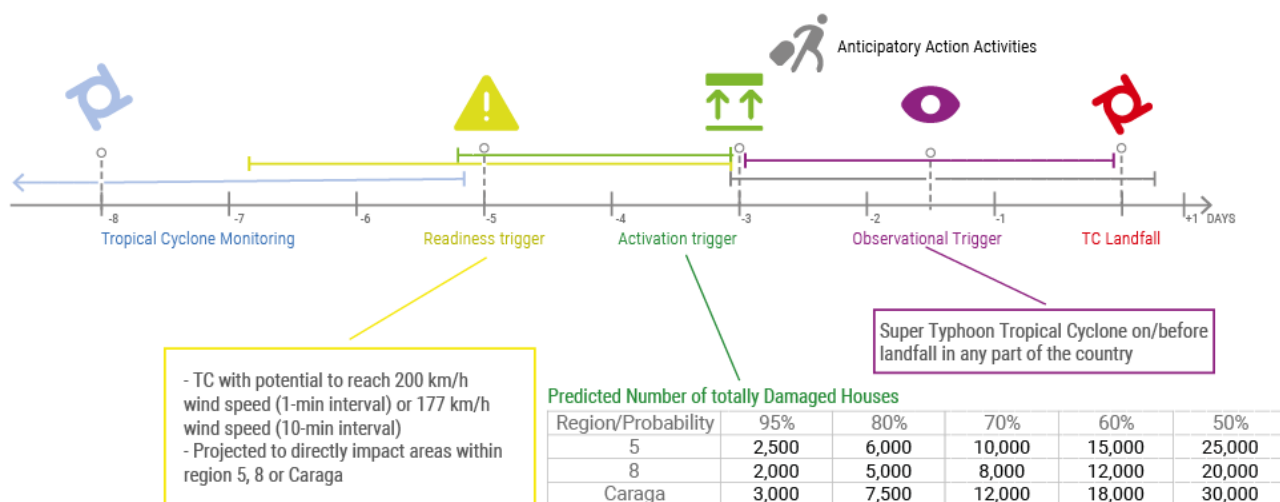

3. Action Activation (no prior readiness activation)

- The readiness and action activation can be triggered at the same time with a cut-off of 72 hours prior to the tropical cyclones forecast landfall. This also implies that an action trigger can be activated without prior readiness activation.
- Activation trigger can be reached and activated if the estimates on the total number of destroyed houses reaches the thresholds even without readiness trigger activation on or before 72 hours before the tropical cyclones forecast landfall.

4. Observational Triggers: at landfall or up to 72 hours before landfall of a super typhoon (185 km/h, 10 mins sustained wind speed)

- If the anticipatory action triggers are not met at landfall/at a minimum 72 hours prior to landfall, an observational trigger may be activated any time from that point up until landfall (0 to 72 hours before landfall). The classification for a tropical cyclone activation the observational trigger is a super typhoon on/before landfall with sustained wind speeds of 185 km/h or higher (10 min sustained windspeed), as reported by state weather bureau PAGASA.
- OCHA to meet with OCD (if possible) and/or access PDRA scenario (if available) as soon as possible when a forecast of super typhoon is known. It can be before the 72hrs or at least 2 days before landfall.

- Meeting of CERF AA agencies to reach a consensus based on available information should be held as soon as a super typhoon forecast becomes available. This can happen even before the 72-hour mark, but final decisions may need to wait until the AA threshold is either met or not met at the cutoff time of 72hrs before forecast landfall.
- The CERF AA group would have to consider that at least 50% of region will be within the damaging winds of super typhoon.

Return Periods

Readiness	Activation	Observational	Overall
Wind Speed using hindcasts	510 Model	Wind Speed	
177 km/h (10-min) or 202 km/h (1-min)		185 km/h (10-min) or 211 km/h (1-min)	
5.7	3.4	4.5	3.5

Activation Protocol

Organization	Activity	Timeline	Medium	Output
OCHA PHL, OCHA CHD and AA focal points	Monitoring of Tropical Cyclone (TC) formation; Join Government PDRA meetings if invited.	6-10 days prior to forecast landfall	Communication via the CERF AA focal points; regular email update from OCHA to all AA focal points at country and HQ level.	Forecast track and category of a typhoon; Generate TC timeline indicating the dates and days until forecast landfall.

OCHA CHD and OCHA	Generation of impact estimates	3-7 days prior to forecast landfall; every 6-12 hours based on PAGASA, ECMWF and other data (if available)	Regular email update from OCHA to core group, including country, regional and HQ level and CERF	Forecast category and track of a typhoon;; Impact and probability estimates, impact maps and landfall map (if possible)
OCHA and Agency AA focal points	If the readiness trigger is reached: Readiness activation notice indicating the region is sent to AA partners. Meeting with AA agency focal points.	3-7 days prior to landfall	Email from RC via OCHA to agencies with attached estimates as well as other meteorological agency (i.e. PAGASA) reports	Readiness or action trigger notice (indicating which region is activated) is sent to AA partners.
RC or OCHA on behalf of RC	Notify CERF on the readiness trigger activation of AA	3-7 days prior to landfall	RC or OCHA PHL to send email to CERF	Email to the CERF secretariat on readiness activation
CERF	CERF sends out approval letters to agencies, indicating the allocation of funds.	Upon activation of readiness trigger	CERF email to RC and UN agencies	Email from CERF to UN agencies
OCHA CHD and OCHA	Generation of impact estimates (number of damage houses with probability)	3-5 days prior to forecast landfall; every 6-12 hours based on 510 modelling process	Email to AA agencies and OCHA HQ / Regional Office	Impact and probability estimates, impact maps and landfall map
UN agencies	Inform local partners, FSPs and partner government agencies on the potential activation of AA in target areas. Agencies will also start implementing readiness activities.	3-5 days prior to landfall	Meeting and email; Provincial lead to inform all local partners including LGUs	Early warning messages
OCHA CHD and OCHA and AA focal points	If action triggers are met for a particular region on or before 72 hrs (3 days) prior to landfall, with or without a prior readiness trigger, recommend to RC for AA Activation	On or before 72 hrs (3 days) prior to expected landfall.	Meeting and email	Recommendation submitted to the RC for activation
RC or OCHA on behalf of RC	Notify AA partners on activation action.	On or before 72 hrs (3 days) prior to forecast landfall	RC or OCHA to send email to AA agencies and CERF	Activation notice sent to AA partners and OCHA HQ and Regional including CERF secretariat
RC or OCHA on behalf of RC	Notify CERF on the action activation of AA	On or before 72 hrs (3 days) prior to forecast landfall	RC or OCHA to send email to CERF	Email to CERF on AA action activation
CERF	If there is no prior readiness activation, CERF sends out the approval letters once the action trigger threshold is reached.	Upon activation of action trigger	CERF email to RC and UN agencies	Email from CERF to UN agencies
UN agencies	Inform local partners, FSPs and partner government agencies on the potential activation of AA in target areas. Agencies will also start implementing all AA activities.	3-5 days prior to landfall	Meeting and email; Provincial lead to inform all local partners including LGUs	Implementation of AA activities
OCHA	If activation triggers are not met for a scenario that was activated for readiness 72 hrs prior to landfall, an activation trigger stand down notice.	<72 hrs prior to landfall	Meeting and email	Stand down notice sent to partners and to CERF
CERF	If the triggers are not met and there is no indication that the TC will intensify to a super typhoon	<72 hrs prior to landfall	Email	Notice from CERF to AA agencies to inform that they cannot spend the action amount in the budget
RC or OCHA on behalf of RC	If TC reaches super typhoon (>185 kph wind speed) category on or before landfall, without the	less than 72 hours before landfall or at landfall	Meeting and email	Observational trigger activation notice to CERF, AA agencies

	activation of the action trigger, activate observational trigger			
CERF	If there is no prior action trigger activation, CERF sends out the approval letters once the observational trigger threshold is reached.	Upon activation of action trigger	CERF email to RC and AA agencies	Email from CERF to UN agencies
OCHA, AA agencies, OCHA CHD	Continue monitoring of TC development after stand-down notice	1-2 days prior to landfall	Email	Impact maps ; TC track

3. Anticipatory Action Plan

1. Pre- Agreed Financing

The ERC has pre-arranged up to \$6 million from CERF to support the 2025-2026 framework. This funding is complemented by an additional \$4 million from other partners, including UN agencies, NGOs and the Red Cross. The funding will allow partners to provide assistance for Food Security and Agriculture, CCCM and Emergency Shelter, Gender Based Violence, WASH, Sexual and Reproductive Health, Child Protection, Nutrition and Education. A majority of the funding will be delivered through Cash (63% for Region 63% for Region 8, 67% Region 13.)i

Region 5 People targeted	Region 5 Funding (USD)	Region 8 People targeted	Region 8 Funding (USD)	Region 13 People targeted	Region 13 Funding (USD)
290,00	5,649,135	416,102	5,997,578	249,400	5,048,355

2. Targeting people at-risk coordination and localization

Region 5 (Bicol), 8 (Eastern Visayas) and 13 (Caraga) were selected as they are most often where destructive typhoons made their initial landfall, which brings the greatest damage in terms of wind impact to vulnerable households and communities.

Building on lessons learned from the Flagship Initiative on community suggested solutions, FAO, WFP and UNFPA will continue to provide community cash grants, also termed Group Cash Transfers (GCT).

Partners agreed to continue to use a harmonised MPC transfer value, using a Minimum Expenditure Basket methodology to derive the transfer value. Updated MEB value for 2025 as agreed by the Cash Working Group is PHP 11,830, which was endorsed by the HCT in August 2025. The MPC value for AA is set at PHP 4,000 (US\$71), equivalent to 1/3 (33%), approximately 1/3 of the monthly MEB Transfer Value, to account for the 10-day lead period.

Agency	Modality	People targeted	Budget	Payments / Delivery	Targeting	Transfer Values
FAO	MPCA Community Cash Grants	Region 5: 30,196 Region 8: 32,374	Region 5: \$958K Region 8: \$959K	SCB and Metrobank platform with partner remittance centers, cash pick up centers and e-wallet outlets	Vulnerable farmers and fisherfolks	MPCA: PHP 4,000
IOM	Cash for Shelter	Region 5: 18,353 Region 8: 91,947 Region 13: 34,823	Region 5: \$707K Region 8: \$2.2M Region 13: \$1.2M	Palawan Direct Cash Payout	Pre-identified families with fragile shelter status in DSWD 4Ps registry IDPs in centres	CfS: PHP 5,500
WFP	MPCA	Region 5: 162,895 Region 8: 89,440 Region 13: 167,500	Region 5: \$2.7M Region 8: \$1.58M Region 13: \$2.77	Bank to Bank Transfer	Pre-identified families registered DSWD 4Ps	MPCA: PHP 4,000
UNICEF	SP top-up	Region 5: 43,750 Region 8: 161,395	Region 5: \$291K Region 8: \$541K	Land Bank	Subset of vulnerable population identified in DSWD 4Ps registry	PHP 1,200
UNFPA	Sectoral Cash for health/GBV	Region 5: 34,806 Region 8: 44,122 Region 13: 47,077	Region 5: \$990K Region 8: \$745K Region 13: \$1.2M	Direct Cash Partner Remittance Centres	Pregnant, most vulnerable adolescent girls and most at risk women and girls	PHP 1,500-2,850

The OCHA-facilitated AA for 2025 will continue using the coordination model applied in previous years, ensuring consistent communication and close operational collaboration with partners and local authorities in the targeted areas.

To strengthen local engagement, each participating UN agency has been designated as the *CERF Anticipatory Action Pilot Lead* for specific provinces. These leads are responsible for:

- Keeping regional, provincial, and municipal authorities well informed about the project objectives;
- Inform authorities on the selection of people to target for assistance and ensuring their involvement in the validation process;

- Ensuring UN partners are represented in key coordination platforms – particularly the Pre-Disaster Risk Assessment (PDRA) meetings organized by Provincial Disaster Risk Reduction and Management (DRRM) Offices ahead of potential typhoon landfalls.

At the national level, OCHA will represent the Humanitarian Country Team (HCT) by attending the PDRA meetings convened by the National Disaster Risk Reduction and Management Council (NDRRMC).

Region	Province	Coordination Provincial Lead
Region V (Bicol Region)	Albay	WFP
	Camrines Sur	IOM
	Catanduanes	FAO
	Sorsogon	WFP
	Camrines Norte	WFP
Region VIII (Eastern Visayas)	Eastern Samar	UNFPA
	Leyte	IOM
	Northern Samar	IOM
	Samar (Western Samar)	IOM
	Southern Leyte	IOM
Region VIII (Caraga)	Surigao Del Norte	WFP
	Dinagat Islands	UNFPA
	Surigao del Sur	WFP

While the UN agencies are main recipients of CERF funding, each of them works with local partners to ensure the allocated CERF budget under this framework goes to local NGOs and strategic partners, to the extent interventions allow such partnerships. For the 2025 framework, 17% of funding in Region 5, 20% in Region 8 and 13% in Caraga will go to NGOs, including local NGOs. Localization is supported through activities such as Community Cash Grants and harmonization with the government's social protection systems.

UN AGENCY	IMPLEMENTING PARTNERS
FAO	Educo, Oxfam with People's Disaster Risk Reduction Network (PDRRN), local farmers/fisherfolks associations
IOM	CARE, CRS, World Vision
UNFPA	ADRA, Good Neighbors Philippines (GNIP), Assistance and Cooperation for Community Resilience and Development, Inc (ACCORD)
UNICEF	Department of Social Welfare and Development (DSWD)
WFP	Department of Social Welfare and Development (DSWD)

3. Priority Interventions

FAO will release agro-climatic early warning messages to communities. FAO will provide multi-purpose cash assistance to 5,750 (Region 5), 5,800 (Region 8) most vulnerable households of farmers and fisherfolk registered in the Registry System for Basic Sectors in Agriculture (RSBSA).

FAO will also work with partner organizations, local fisherfolk organizations and communities to rent identified safe spaces, basketball courts, local community halls, and private warehouses to store critical livelihood items, such as boats, gears, fishnets and other

fishing paraphernalia for fisherfolks and tools and farm equipment for farmers. By providing safe-storage sites, the intervention will preserve hard-won development gains and key livelihoods.

IOM, together with implementing partners, will strengthen the application of minimum CCCM standards in evacuation centres through provision of modular tents, distribution of key messages and deployment of CCCM personnel; and ensure households with damaged shelters have immediate access to emergency shelter assistance through cash for shelter interventions.

UNFPA will provide Direct financial assistance to pregnant women in their last trimester, and to GBV survivors, including women living in geographically isolated and disadvantaged areas (GIDA), persons with disabilities (PWDs), pregnant teens, and LGBTQIA+ headed families. This assistance aims to empower them to prepare for the typhoon and address immediate needs.

UNFPA will also provide community cash grants (\$2,000) to Women-led organizations funding to facilitate preparedness activities within their communities before the typhoon makes landfall.

UNICEF will provide an unconditional cash transfer of \$22 (Php 1,200) through the government's social safety net to support the child-centered needs of vulnerable families projected to be impacted by a destructive typhoon. In addition, UNICEF will activate child protection measures, disseminate key sectoral messages, and ensure feedback channels are accessible to affected communities. Supplies will be prepositioned and replenished for nutrition and WASH, including water quality monitoring and treatment systems and nutrition supplies and commodities, to enable rapid testing, treatment, and continuity of essential services.

WFP's AA intervention will be the distribution of multi-purpose cash assistance to families and in the event that the observational trigger is activated depending on assessed needs WFP will provide community cash grants to selected associations.

4. Learning, Monitoring, and Evaluation

This framework offers significant opportunities to both generate and apply learning, thus contributing to the overall improvement of humanitarian action ahead of and in response to rapid-onset shocks. Each agency will use its existing monitoring & evaluation systems (if possible) to collect and track data on implementation progress and outputs achieved. All findings will be shared. In addition, partners have agreed to include a set of common questions into their respective Post Distribution Monitoring (PDM) in case of framework activation.

The PDM report along with data will be made available to all framework partners. The PDM will be done in close coordination and communication with participating agencies. An after-action review will further be conducted to gather lessons learned from the development and potential implementation of the framework. Upon activation of the AA framework by the activation trigger, OCHA may engage an external partner to conduct an independent evaluation of the implementation of AA activities under the framework.

In 2022, the CERF AA pilot included a [Pre-Crisis Survey](#) and a [simulation exercise](#), both of which proved instrumental in enhancing the design and implementation of subsequent CERF AA frameworks. These activities provided valuable insights into operational readiness, stakeholder coordination, and trigger validation. The pre-crisis survey offered a real opportunity to embed accountability to affected people within the design phase of the anticipatory action interventions. Feedback from communities at risk was used to determine which AA activities were feasible and preferred.

5. Advocacy and public communication

The UN agencies and partners agreed to put strong emphasis on communication activities also to ensure communicating a common message before, during, and after the AA interventions.

The focus of communications efforts will be on explaining the process of AA activation and non-activation targeted to LGUs and affected communities and beneficiaries.

6. Validity

The present framework is valid for an initial period of two years following endorsement of the ERC (2025-2026). The 2025 framework will cover until January 2026 while the 2026 framework will cover until January 2027. This is to cover any unusual tropical cyclones formation in the month of January. For 2026, lessons learned from both the development and potential implementation of the framework will be applied to enhance the current framework in collaboration with the AA partners agencies.

This includes, among other things, potential changes to the trigger mechanism, coordination, financing, co-funding, action plan (especially the integration of multi-purpose cash), and geographical scope.

In the event of an activation, request for replenishment can be initiated by a request from the CERF AA agencies coordinated by OCHA through the RC. This is dependent on the approval of the ERC.

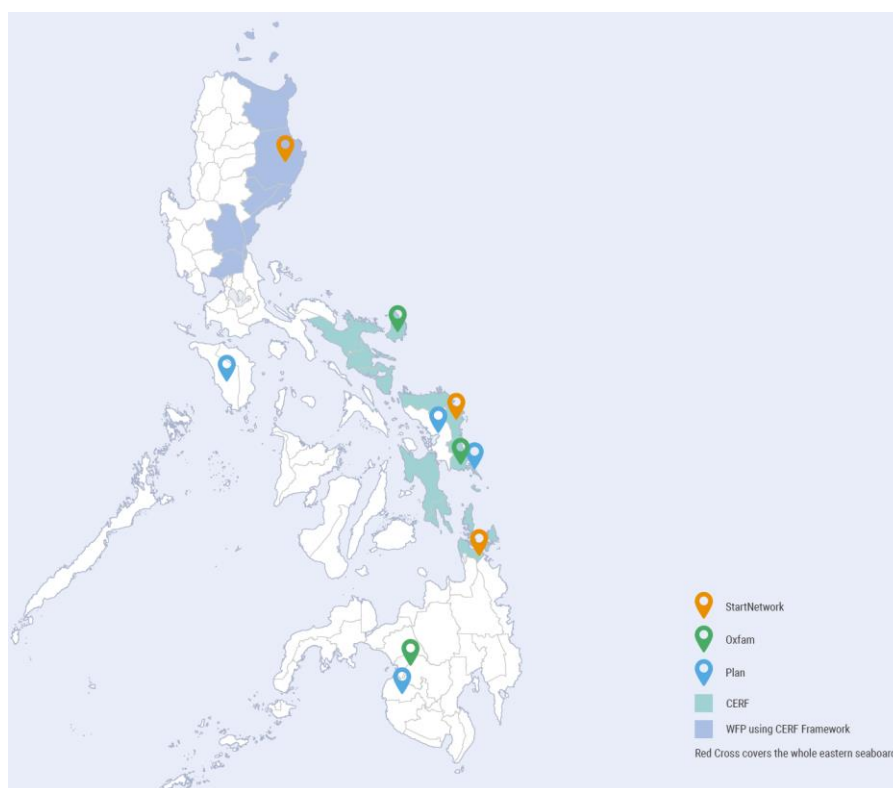

4. Other anticipatory action initiatives in the Philippines for tropical cyclones

Beyond the UN agencies directly receiving CERF funding for AA, OCHA is actively coordinating with a broader group of partners to support efficient and cohesive implementation across the board. OCHA is part of the core group of member agencies under the AA Technical Working Group (AATWG) currently chaired by the Department of Social Welfare and Development (DSWD) and co-chaired by the Philippines Red Cross (PRC). The core group members includes WFP, FAO, StartNetwork and Oxfam.

This coordination includes joint discussions on geographical targeting, transparent communication around trigger activation, and timely information sharing. While these partners receive CERF funding indirectly through UN agencies, many develop their own framework with their own internal resources or donor funds to expand the reach of AA interventions and support additional people at risk.

Agencies	Location	Activities	Amount (in USD)
----------	----------	------------	-----------------

Start Network	Region 2, 8, Caraga	Cash Grants, hygiene kits, assistive devices	•Moderate: \$485K •High: \$892K • Very High: \$1.1M
Plan International Pilipinas	Region 4B, 8, 12	Cash for food, MPCA, distribution of hygiene kits/water kits, livestock/assets evacuation and tagging	\$42K
WFP	Region 2 and 3	MPCA	\$1.2M \$1.9M
Oxfam Pilipinas	Region 5, 8, and BARM	MPCA, evacuation support, cleaning kits, medicine prepositioning, community orientation	\$19K-68K
Philippine Red Cross	All	Sectoral cash, shelter strengthening	\$423K

WFP will be activating AA using internal funding in Region 2 and Region 3 using OCHA AA Framework triggers and protocols.

5. Government AA Institutionalization Initiative

In 2022, the National AA Technical Working Group (TWG), which is co-led with Government agencies, initiated the creation of a bill to institutionalize AA in the government preparedness and response structure. Through the work and advocacy of the AA TWG, the bill on the Declaration of the State of Imminent Disaster has been passed in the Philippine Congress and Senate on its Third and final reading in June 2025 and was signed into a law by the President on 12 September 2025 ([RA 12287](#)). The law will empower the Government

to act earlier, enabling preventative measures and reducing potential harm before a disaster strikes. It will utilize standardized triggers and thresholds to activate and will tap into Local DRRM Funds, and National DRRM Funds for anticipatory actions. It also requires agencies to allocate portions of their budgets for AA, ensuring that financial resources are available and accessible when needed. The formulation of the Implementing Rules and Regulations (IRR) will be initiated by the National Government with technical support from members of the AA Technical Working Group. The next iteration of the framework will fully align with the legislation once the IRR is developed.

The Government of the Philippines led by PAGASA is currently developing Multi-Hazard Impact-Based Forecasting and Early Warning System (MHIBFEWS). It is impact-based forecasting that includes typhoons, landslides and other climate related shocks that combine data and local knowledge to predict the potential impact to communities. The system is expected to serve as a platform to harmonize AA triggers and thresholds starting in 2026.

6. Annexes

Core Principles

Each anticipatory action framework is tailored to the local context. OCHA has identified nine core principles that should apply to the framework in the Philippines:

- **Prioritizing a multi-sectoral approach:** Partners should prioritise multi-sectoral, co-targeted interventions, when possible, to maximise synergies and to achieve great impact.
- **Ensuring the centrality of protection:** In line with the IASC centrality of protection policy, and the principle of “leaving no one behind” (2030 Agenda), all partners implementing anticipatory interventions have the responsibility to ensure that their response will not aggravate the exposure of communities to risks of violence, insecurity, extortion and exploitation. Anticipatory actions must also ensure that they benefit all communities (local communities, displaced communities, returnees, and refugees) based on their needs, with due attention given to obstacles linked to gender, age, disability or social affiliation.
- **Ensuring gender equality is central to inclusive and accountable anticipatory action:** In line with IASC Policy on Gender Equality and the Empowerment of Women and Girls in Humanitarian Action, all partners are responsible and accountable to ensure humanitarian action, including anticipatory action is: rights-based; recognises gender based and intersectional needs, as well as potential gender-based discrimination in access to resources and services; facilitate leadership and contribution of crisis-affected women and girls in the planning, implementation, monitoring and evaluation of anticipatory actions and early response, that directly impact their lives and those of their dependents and wider communities.
- **Promoting accountability to affected populations and the Protection from Sexual Exploitation and Abuse (PSEA):** Partners engaged in the implementation of the anticipatory action framework are responsible for the integration of accountability to affected populations approaches in their activities. This includes making all efforts to solicit, hear, and act upon the voices and priorities of affected people (including the most marginalised and at-risk women, men, girls and boys) in a coordinated manner, before, during, and after anticipatory action. It also means ensuring that community feedback leads to corrective action in future anticipatory action.
- **Supporting localisation:** All partners involved in the implementation of this framework are expected to honor the HCT’s commitment towards localisation. Equitable partnerships with local actors building upon their long-term relationships and trust with communities during anticipatory action are crucial.
- **Engaging in partnerships:** Collaboration across humanitarian actors is key to ensuring that all sectors are engaged, and that assistance is mobilised according to the AA framework.

- **Generating development and climate adaptation co-benefits:** Pilot participants are encouraged to consider how financing for anticipatory action can complement financing for development by reducing suffering and addressing the root causes of problems while supporting adaptation to climate change.
- **Capturing learning:** Monitoring, evaluation and learning activities should be embedded at every phase of the development and implementation of the AA framework.
- **Striving for integration:** The framework seeks to integrate the anticipatory action activities into the existing humanitarian architecture and to foster linkages with long term programming, including resilience and development initiatives.

Draft Activation Messages

Readiness trigger message

From: Arnaud Peral, RC or OCHA Philippines

To: CERF secretariat

CC: OCHA Philippines, OCHA HQ and Regional Teams, AA Agencies (including agencies that are not recipients of CERF funds)

Dear CERF secretariat,

The readiness trigger has been reached as based on PAGASA and ECMWF data a Tropical Cyclone with potential to reach wind speed greater than 177 km/h maximum 10-minutes sustain wind speed/200 km/h 1-minute sustain wind speed is projected to directly impact areas within Region 5/8/13. Under the Framework Region 5/8/13 is now activated for readiness. Region 5/8/13 funding requirement is xx M for FAO, IOM, UNFPA, UNICEF and WFP.

Details are attached. Grateful for your swift attention to this notice.

Activation trigger message

From: Arnaud Peral, RC or OCHA Philippines Head on his behalf

To: AA Agencies

CC: CERF secretariat, OCHA HQ and Regional Teams

Dear AA Agencies, Since the readiness trigger has been reached, the OCHA with CHD monitored every 6-12 hours the forecast model and its predictions on the number of totally damaged houses. Based on the latest impact map, activation threshold has been reached as the predicted number of destroyed houses amounts to [XXX] with [xx%] probability, which falls within the range of the threshold probability matrix under Region 5/8/13. Since we have activated for readiness Region 5/8/13, we are therefore activating the CERF anticipatory action Framework for Region 5/8/13 within the 72 hours (3 days) before projected landfall. Further details are attached. Good luck to the teams implementing anticipatory action interventions.
