

1. Executive Summary

This document presents the framework for anticipatory action (AA) and early response (ER) in Mozambique, including the trigger, the pre-agreed action plan and the pre-arranged financing.

The context: Mozambique is regularly impacted by cyclones, especially in the low-lying coastal areas that are home to a majority of the population. Since 2017 alone, some 5 million people have been affected, mostly in the provinces of Zambezia, Nampula and Sofala. Moreover, cyclones are the natural hazard with the greatest attributable economic losses. Since 2000, Mozambique has been impacted by a major tropical cyclone every other year on average. The cyclones that hit the Mozambican coast are increasing in number and intensity¹.

The objective: This framework seeks to provide coordinated anticipatory action and early response to people at risk of or affected by cyclones in Mozambique. The initiative provides life-saving assistance to people across six provinces: Cabo Delgado, Nampula, Zambezia, Sofala, Inhambane, and Gaza, with AA being implemented in selected pilot districts.

The development process: The framework was developed through a participatory process led by the Resident and Humanitarian Coordinator and coordinated by OCHA Mozambique in collaboration with the national technical working group on anticipatory action.

The trigger

The financing and activities included in this framework will be triggered by either the following readiness trigger, action trigger or observational trigger.

- **Readiness trigger (lead time up to 120 hours before landfall):**
 - The readiness trigger is using the same conditions defined for the action trigger (see below) but is considering forecasts with lead times between 72 and 120 hours.
- **Action trigger (lead time between 72 and 6 hours before landfall):**
 - The exposed area corresponding to a severe tropical storm of at least 89km/h overlaps with at least one of these districts: Angoche, Maganja Da Costa, Machanga or Govuro OR
 - The exposed area corresponding to a tropical cyclone of at least 119km/h overlaps with at least one of these districts: Mogincual, Namacurra, Dondo, Cidade Da Beira, Buzi or Vilankulo.
- **Observational trigger (from landfall up to 48 hours after landfall):**
 - Forecasts issued around landfall indicate that landfall will be within the selected provinces and the intensity at landfall will be at least a tropical cyclone of 119km/h OR
 - The sum of rainfall within a given province the days before, of and after landfall (sum of rainfall over 3 days) around the landfall location exceeds 120 mm.
 - If the observational rainfall trigger is reached only, either the HC or the CERF secretariat can stop an activation within 48 hours of landfall, should they determine that available information indicates that the humanitarian impact is not severe to an extent that justifies a CERF allocation.

¹ <https://africanclimatefoundation.org/wp-content/uploads/2023/11/800834-AFC-Mozambique-country-note-05A.pdf>

Partners also agreed to conform with the government-mandated *cut-off time of 6 hours* before landfall for the action trigger to protect humanitarian personnel and people targeted. This means, if an action trigger is reached at any time during the 6 hours before expected landfall, the framework will not be activated, and no activities will be implemented.

The action plan

The framework will enable agencies to implement both anticipatory and early response activities in a coordinated manner. The pre-agreed actions will focus on the following core objectives:

- **Communicating risks, engaging with communities, and early warning messaging:** Partners will collaborate to disseminate joint early warning signals as well as sector-specific messaging, including on people's rights to safe and free assistance.
- **Supporting people in temporary accommodation centers (TACs):** Partners will ensure TACs are prepared, and people receive food, WASH and other assistance.
- **Providing in-kind assistance:** A set of in-kind assistance activities such as the provision of shelter kits, dignity kits and hygiene and water treatment products.
- **Facilitating access to services:** The framework supports access to health, gender-based violence (GBV), child protection, and water, sanitation and hygiene (WASH) services.

Early response activities were selected based on experience from previous cyclone responses, operational capacity and the ability to deliver within a short period of time after the shock manifests. The implementation of the early response activities as part of this framework should not exceed 2-4 weeks after landfall.

The financing

The Emergency Relief Coordinator (ERC) has pre-arranged up to \$6 million from the Central Emergency Response Fund (CERF) to support the present framework. The funding will allow partners to provide assistance in the Food Security (\$1.58M), WASH (\$1.3M), Shelter (\$1.25M), Health (\$700k), Sexual and Reproductive Health (\$364k), CCCM (\$350k), GBV (\$336k), Child Protection (\$100k), and Logistics (\$20k) sectors and areas of responsibilities. In addition, based on the given activation scenario, WFP commits up to USD 979,000 from its dedicated anticipatory action trust fund for the 2024/2025 season. Funding tranches for readiness, anticipatory action and early response are tied to the different triggers.

The learning

The present framework offers important learning opportunities. Partners have agreed to conduct a joint post-distribution monitoring exercise in the case of a framework activation. In addition, an after-action review will be conducted to gather lessons learned from the development and potential implementation of the framework. Partners also commit to engage in more comprehensive learning efforts in the future.

2. Introduction

Objectives of anticipatory action

There is broad agreement for the international humanitarian sector to move from a largely responsive to a more anticipatory approach. An anticipatory approach leads to a more effective, efficient and dignified response. It also protects hard-won development gains.

Today, we can predict with increasing confidence the occurrence and humanitarian impact of certain climate-related shocks and infectious disease outbreaks. By combining different analytical approaches, out-of-the-ordinary weather events can not only be predicted, but their projected impact can proactively be mitigated based on pre-identified anticipatory actions. Building on growing evidence that acting prior to the onset of a predictable hazard is significantly more (cost-)effective than traditional humanitarian response, OCHA has facilitated the setup of multiple Anticipatory Action frameworks.

Each framework comprises 3 core elements, all of which are underpinned by a clear learning, monitoring and evaluation plan:

- A robust forecasting embedded in a clear decision-making process (the **trigger**).
- Pre-agreed activities that can fundamentally alter the trajectory of the crisis (the **action plan**).
- Pre-arranged funding (the **financing**).

Anticipatory action is still an innovative space. Thus, in addition to the 3 core elements, OCHA also invests in documenting evidence and learning from each framework.

Each anticipatory action framework is tailored to the local context. Additional core principles that apply to the framework in Mozambique can be found in the annex.

Figure 1. Building blocks of anticipatory action

Early response provisions

There is growing evidence demonstrating the positive impact of anticipatory action on communities affected by predictable shocks². At the same time, the erratic nature of cyclones, which often rapidly intensify or change direction unexpectedly creates operational challenges. In such cases, a cyclone may cause significant humanitarian consequences, but anticipatory action may not be possible or to a limited extent. Lessons from existing anticipatory action initiatives for cyclones have shown that including provisions for early response in the framework can facilitate (when deemed necessary) a much faster mobilization of pre-agreed activities and processes to respond effectively to the most immediate post-disaster needs. As such, by including an early response component, the present framework pursues the following objectives:

- Ensure a **timely response** that supports communities and addresses their specific needs before, during and in the immediate aftermath of the shock
- Allow for the release of funds and quick implementation even when the **window of opportunity** for anticipatory action has passed
- Ensure greater **geographical flexibility**
- Capture events characterized by severe **rainfall** (see 3. Forecast and Trigger)

Exposure to and humanitarian impact of cyclones in Mozambique

Mozambique is regularly impacted by cyclones, especially in the low-lying coastal areas that are home to a majority of the population. Since 2017 alone, some 5 million people have been affected, mostly in the provinces of Zambezia, Nampula and Sofala. Moreover, cyclones are the natural hazard with the greatest attributable economic losses. Tropical Cyclone Idai, which hit Mozambique in 2019, is, for instance, one of the two most costly events (estimated at US\$ 1.96 billion) in Africa over the past 50 years. **The annual cyclone season in Mozambique usually lasts from November until March.** However, events may also occur outside of this period. Historical data from the National Institute for Disaster Management and Risk Reduction (Instituto Nacional de Gestão e Redução do Risco de Desastres, INGD) shows that the impact of cyclones in Mozambique has varied, affecting between 73,000 people (Cyclone Chalane in 2020) and 1.5 million people (Cyclone Idai in 2019). Women and girls were among the most vulnerable groups during and after the disaster. They faced increased risks of gender-based violence (GBV), displacement, and loss of livelihoods. Women, particularly in rural areas, were also heavily affected due to challenges in accessing relief and recovery resources. In 2023, Tropical Cyclone Freddy hit Mozambique twice, causing destructive winds, extreme rainfall, and widespread flooding. Despite accurate early warnings and coordinated disaster management, significant damage occurred, affecting infrastructure, displacing populations, and disrupting essential services. Roads were cut off, hindering social services, trade and provision of healthcare thus worsening the cholera outbreak that had started in September 2022. In 2024, Cyclone Chido affected over 450,000 people in Cabo Delgado and Nampula. The cyclones that hit the Mozambican coast are increasing in number and intensity³. Since 2000, Mozambique has been impacted by a major tropical cyclone every other year on average (see figure below).

2.3 years
based on 23 years with
cyclone data, since 2000

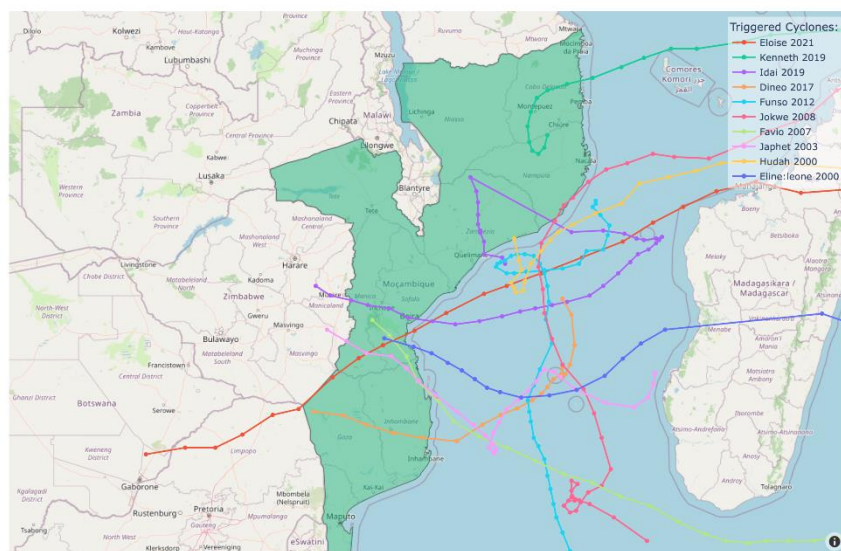

Figure 2. Historical tracks of cyclones in Mozambique since 2000

Alignment with Government Policy

The National Institute for Disaster Risk Management and Reduction (INGD) of Mozambique, in collaboration with partners, has developed a Manual of Standard Operating Procedures for Anticipatory Action to Floods and Cyclones building on the country's experience with developing a similar manual for [anticipatory action for drought](#) in 2022. The AA component of the present framework is in complete alignment with the manual and was developed in collaboration with the national technical working (TWG) group for AA. Specifically, this applies to the following elements:

- The action trigger and activation protocol
- The anticipatory action plan
- The geographical prioritization

In agreement with the government-led TWG, the early response component will complement the anticipatory action efforts without formally constituting a part of the national manual for AA.

Furthermore, Mozambique's National Adaptation Plan (NAP) to the United Nations Framework Convention on Climate Change (UNFCCC) identifies the increased frequency and intensity of tropical cyclones as a significant threat. Anticipatory action, including through this coordinated framework, aims to also reduce vulnerability and enhance the adaptive capacity of its communities in the face of climate change.

3. Forecast and Trigger

Forecasts

Under the World Meteorological Organization's Tropical Cyclone Programme, the Regional Specialized Meteorological Centre (RSMC) in La Réunion has the responsibility for detecting and forecasting tropical cyclones (TCs) in its zone of responsibility, which includes the South-West Indian Ocean basin, encompassing Mozambique. As such, RSMC La Réunion's TC forecasts are the internationally recognized authoritative source for TCs in this region. RSMC La Réunion is operated by Météo-France.

RSMC La Réunion issues official TC track forecasts with a 120-hour lead time. These forecasts include the TC's forecasted category and position and 5-day TC formation risk outlooks. This framework includes an observational component that uses the forecasts issued around landfall and rainfall data from NASA's Integrated Multi-satellite Retrievals for GPM (IMERG)⁴ on the days before, of and after landfall.

Triggers and thresholds

The financing and activities included in this framework will be triggered by either the readiness trigger, action trigger or the observational trigger. The activation thresholds and data sources have been selected to ensure full integration with the government-led AA activities and to capture most of the historical rapid response allocations made by CERF while maintaining a return period for activation around 3 years. The framework relies on the following triggers to release pre-arranged financing and implement activities.

- **Readiness trigger (lead time up to 120 hours before landfall):**
 - The readiness trigger is using the same conditions defined for the action trigger (see below) but is considering forecasts with lead times between 72 and 120 hours
- **Action trigger (lead time between 72 and 6 hours before landfall) (see Table 1):**
 - The exposed area corresponding to a severe tropical storm of at least 89km/h⁵ overlaps with at least one of these districts: Angoche, Maganja Da Costa, Machanga or Govuro OR
 - The exposed area corresponding to a tropical cyclone of at least 119km/h overlaps with at least one of these districts: Mogincual, Namacurra, Dondo, Cidade Da Beira, Buzi or Vilankulo.
- **Observational trigger (from landfall up to 48 hours after landfall):**
 - Forecasts issued around landfall indicate that landfall will be within the selected provinces and the intensity at landfall will be at least a tropical cyclone of 119km/h OR
 - The sum of rainfall within a given province the days before, of and after landfall (sum of rainfall over 3 days) around the landfall location exceeds 120 mm.
 - If the observational rainfall trigger is reached only, either the HC or the CERF secretariat can stop an activation within 48 hours of landfall, should they determine that available information indicates that the humanitarian impact is not severe to an extent that justifies a CERF allocation.

Partners also agreed to conform with the government-mandated *cut-off time of 6 hours* before landfall for the action trigger to protect humanitarian personnel and people targeted. This means, if an action trigger is reached at any time during the 6 hours before expected landfall, the framework will not be activated, and no activities will be implemented.

In collaboration with technical partners, the analysis of the forecast has been standardized to consider both the cyclone track uncertainty and the expected extent of the wind buffers for the different thresholds in the calculation of the projected cyclone impact area. This analysis code is publicly available in this repository⁶.

⁴ This data source has been chosen because it offers granular data encompassing the entire target area with a short latency period of approximately 24 hours. For more details, visit [IMERG](#) on NASA's website.

⁵ 10-minute sustained winds as reported by Meteo France La Reunion

⁶ [Mozambique Anticipatory Action for Cyclones GitHub Repository](#) managed by the Centre for Humanitarian Data

Table 1. Priority districts for implementation of anticipatory action in Nampula, Zambezia, Sofala, and Inhambane provinces and corresponding action trigger thresholds.

Pilot province	Activation trigger (89km/h)	Activation Trigger (119km/h)
Nampula	Angoche	Mogincual
Zambézia	Maganja da costa	Namacurra
Sofala	Machanga	Beira, Buzi e Dondo
Inhambane	Govuro	Vilankulos

Roles and responsibilities in monitoring the trigger

The monitoring process is managed by OCHA's Centre for Humanitarian Data (CHD) in collaboration with technical partners from partner agencies.

During the monitoring period, every 6 hours, the forecast released by RSMC in La Réunion is evaluated to determine whether the trigger has been reached. The process is outlined below:

- The forecast, containing up to 120-hour lead time, is produced by the RSMC Centre.
- It is automatically added to an FTP server⁷ managed by the RSMC. From the FTP server:
 - Forecast files are downloaded and processed by a script running on GitHub.
 - The forecast is analyzed for wind speeds and rainfall thresholds that overlap with predefined geographic zones.
 - Data is validated against thresholds for severe tropical storms (89 km/h) and tropical cyclones (at least 119 km/h) for designated districts.
 - If a trigger threshold is met, the monitoring team emails the relevant parties under the activation protocol (draft activation messages can be found in the Annex)
 - If no trigger is reached, the system monitors the next forecast cycle and emails the CHD's data science team.

Monitoring will occur from 1 October to 31 May. If seasonal forecasts indicate a significant risk of events outside of these months, the monitoring period may be extended.

Activation protocol

Pre-defining this activation protocol is critical in order to avoid delays, miscommunication, uncertainty or errors once the trigger threshold is reached. OCHA's Centre for Humanitarian Data will monitor the triggers. Activation of the action trigger will be formally decided by the government's Technical Council on Disaster Management (Conselho Técnico de Gestão e Redução do Risco de Desastres, CTGD). The readiness and observational triggers, which are not currently included in the national AA manual, will be initiated by OCHA. Additionally, informal communication channels will be maintained to ensure effective information sharing.

⁷ A File Transfer Protocol server is a secure system that facilitates the transfer of large files over a network.

Who	What
During Mozambique's cyclone season	
OCHA's Centre for Humanitarian Data	Monitors triggers and keeps partners informed of storms that could potentially reach trigger levels
If a readiness trigger is reached	
OCHA's Centre for Humanitarian Data	Informs the RC/HC, HCT, UN agencies, OCHA Mozambique, relevant OCHA HQ sections (HFSA, CERF, OAD), the ICCG, the national technical working group on AA via email (see draft email in annex).
CERF Secretariat	Sends approval letters to UN agencies via email, with RC/HC and OCHA Mozambique in copy
UN agencies and partners	Begin implementing <i>readiness activities</i> as soon as activation has been confirmed
If an action trigger is reached⁸	
OCHA's Centre for Humanitarian Data	Informs Instituto Nacional de Meteorologia (INAM), the RC/HC, UN agencies, OCHA Mozambique, relevant OCHA HQ sections (HFSA, CERF, OAD) via email that trigger threshold is reached
INAM	Confirms trigger and informs INGD
INGD	Convenes Technical Committee on Disaster Management (CTGD), which confirms activation via an email notification
OCHA's Centre for Humanitarian Data	Informs the RC/HC, the HCT, UN agencies, OCHA Mozambique, relevant OCHA HQ sections (HFSA, CERF, OAD), and the ICCG via email that framework is activated (see draft email in annex)
CERF Secretariat	If action trigger is reached without previous readiness trigger: Sends approval letters to UN agencies via email, with RC/HC and OCHA Mozambique in copy If action trigger is reached after previous readiness trigger: Confirms to agencies via email that they are authorized to use the readiness and AA portion of the funding envelope, with RC/HC and OCHA Mozambique in copy
UN agencies and partners	Begin implementing action activities as soon as activation has been confirmed
If an observational trigger is reached based on windspeed	
OCHA's Centre for Humanitarian Data	Informs the RC/HC, the HCT, UN agencies, OCHA Mozambique, relevant OCHA HQ sections (HFSA, CERF, OAD), the ICCG, the national technical working group on AA via email
CERF Secretariat	If observational trigger is reached without previous action trigger: Sends approval letters to UN agencies with RC/HC and OCHA Mozambique in copy If observational trigger is reached after previous action trigger: Confirms to agencies that they are authorized to use the entire funding envelope, with RC/HC and OCHA Mozambique in copy
UN agencies and partners	Begin implementing early response activities as soon as activation has been confirmed

⁸ The exact timing of these steps depends on many factors. All stakeholders are committed to avoiding any delayed in the decision-making process. In the case of cyclone Chido, the CTGD confirmed the activation within 2 hours of the trigger being reached.

If an observational trigger is reached based on rainfall ⁹	
OCHA's Centre for Humanitarian Data	Informs the RC/HC, OCHA Mozambique, CERF
RC/HC and/or CERF	Can object to an activation within 48 hours after information from CHD that trigger is reached. If no objection:
OCHA's Centre for Humanitarian Data	Informs the RC/HC, the HCT, UN agencies, OCHA Mozambique, relevant OCHA HQ sections (HFSA, CERF, OAD), the ICCG, the national technical working group on AA
CERF Secretariat	If observational trigger is reached without previous action trigger: Sends approval letters to UN agencies with RC/HC and OCHA Mozambique in copy If observational trigger is reached after previous action trigger: Confirms to agencies that they are authorized to use the entire funding envelope, with RC/HC and OCHA Mozambique in copy
UN agencies and partners	Begin implementing early response activities as soon as activation has been confirmed
In agreement with national technical working group on AA	
RC/HC	Announces end of trigger monitoring

⁹ In case of the observational trigger based on rainfall, the RC/HC and/or CERF may object to an activation. The Centre for Humanitarian Data will provide information on the extent of rainfall 24-48 after landfall to the RC/HC, OCHA Mozambique and the CERF secretariat along with historical comparisons to assess the potential impact.

4. Anticipatory Action and Early Response Plan

Selection criteria

Anticipatory actions aim to protect populations most at risk of being impacted by a shock. The following criteria were applied to select actions:

1. **Anticipatory character:** Is the action effective in preventing or reducing the humanitarian impact of the shock?
2. **Ability to deliver within the window of opportunity:** Is it possible to carry out the action effectively with the available forecast lead time, i.e. in the window of opportunity between the trigger and the cyclone making landfall?
3. **Operational capacity:** Do the agency and its implementing partners have the demonstrated institutional capacity (thematic, logistic, administrative, financial, human resources) to implement the action effectively given the lead time and scale?
4. **No regrets approach:** In the case of a false alarm, will the proposed actions benefit rather than negatively affect the targeted population?

Early response activities were selected based on experience from previous shocks, operational capacity and the ability to deliver within a short period of time after the shock manifests. The implementation of the early response activities as part of this framework should not exceed 2-4 weeks after landfall.

Priority interventions

The pre-agreed actions, identified in collaboration with the national technical working group on anticipatory action, will focus on the following core objectives:

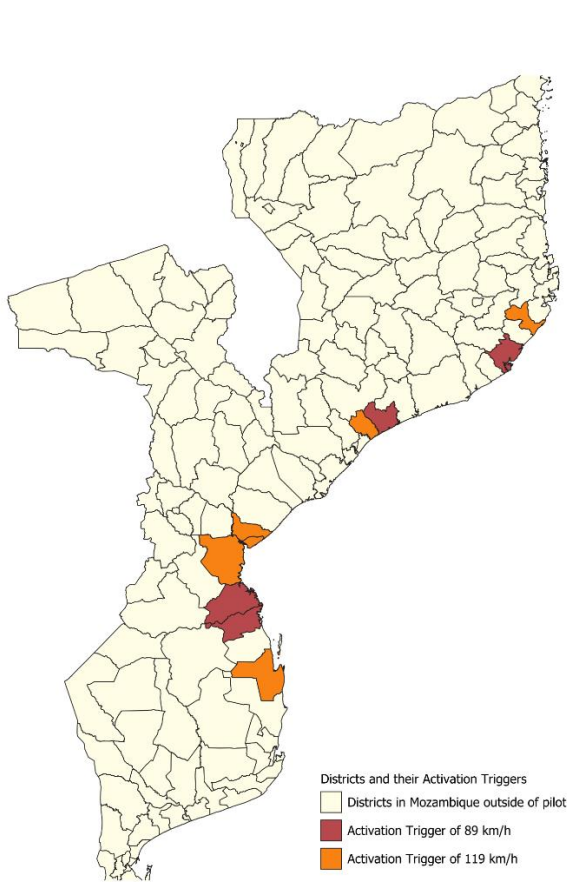

- **Communicating risks, engaging with communities, and early warning messaging:** Partners will collaborate to disseminate joint early warning signals as well as sector-specific messaging, including on people's rights to safe and free assistance. All partners will harmonize their messages through national government platforms in addition to agency-specific channels. Early Warning messages will be distributed after the action trigger in line with the national anticipatory action standard operating procedures.
- **Supporting people in temporary accommodation centers (TACs):** Partners will ensure TACs are prepared, and people receive food, WASH and other assistance.
- **Providing in-kind assistance:** A set of in-kind assistance activities such as the provision of shelter kits, dignity kits and hygiene and water treatment products.
- **Facilitating access to services:** The framework supports access to health, gender-based violence (GBV), child protection, and water, sanitation and hygiene (WASH) services.

Some anticipatory actions and early response activities overlap, while others are specific to each modality. The summary table below (Table 2) provides a snapshot of each agency's planned activities. Further details can be found in CERF project documents.

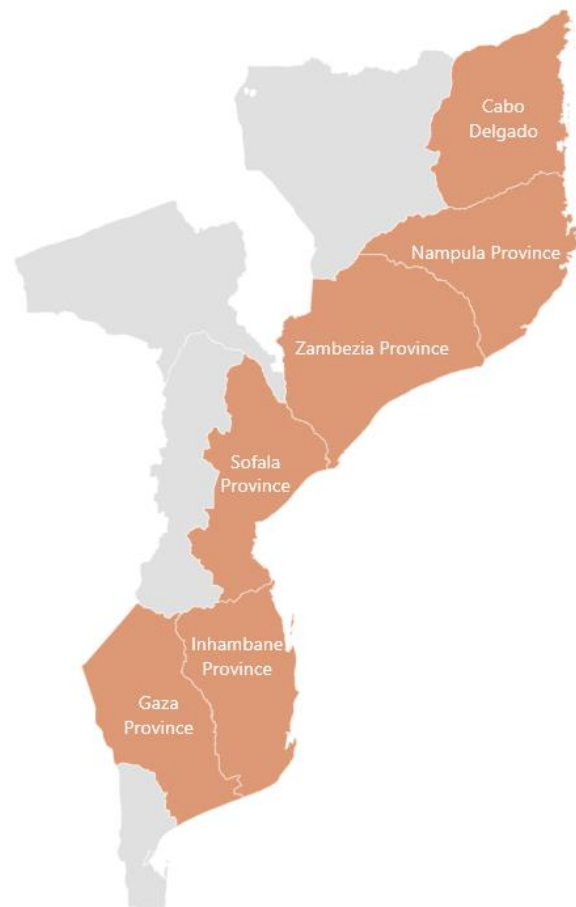

Geographical prioritization

The anticipatory activities will be implemented in 10 priority districts in Nampula, Zambezia, Sofala and Inhambane provinces, in line with the national standard operating procedures (see left map below). These districts were identified by the national technical working group on AA based on an analysis of historical exposure to cyclones and of vulnerability. The observational trigger based on windspeed will enable early response to be implemented in affected districts in the following provinces: Cabo Delgado, Nampula, Zambezia, Sofala, Inhambane, and Gaza (see right map below). The RC/HC may

decide to expand the geographical scope of early response activities based on the observed impact, including cyclone-induced flooding. All partners have confirmed their operational response capacity¹⁰.

Priority districts for anticipatory action

Priority provinces for implementation of early response

Targeting

Partners will jointly target temporary accommodation centers identified in coordination with the government. Agencies will collaborate to identify households, including women-headed households, receiving joint assistance as a preparedness activity. After cyclone landfall, partners will coordinate their activities, including targeting, with relevant stakeholders, including the government, civil society organizations and through OCHA-facilitated coordination mechanisms.

Beneficiary registration

While a significant portion of the in-kind assistance and services will be provided in temporary accommodation centers, the only way of ensuring that sector-specific cash and certain in-kind assistance can be distributed to those in need in the very short window of opportunity prior to cyclone landfall is by pre-registering households and individuals in advance. Registration processes must be inclusive and accessible to women and girls and other vulnerable groups, including people with disabilities and those in rural or hard-to-reach areas.

¹⁰ At the time of the finalization of this framework, UNFPA does not have the operational presence to respond in Inhambane. Consequently, if a trigger is reached in Inhambane only, CERF will not release funds for UNFPA. This may change if operational response capacity is established. Similarly, in Sofala province, UNFPA is only able to implement AA in Beira and Dondo districts, but not in Machanga or Buzi. Hence, if an action trigger is reached only in these latter two districts, no CERF funds will be released at that point.

IOM

While the Government conducts registration, IOM through displacement tracking matrix (DTM) and camp coordination and camp management (CCCM) provides technical assistance, tools, and resources to enhance efficiency, inclusiveness and coverage.

UNFPA

While working closely with its national partners, as well as with the government, UNFPA will identify and register vulnerable women and girls in high-risk areas who might require support during or after a cyclone. Pre-crisis vulnerability data, including information on pregnant women, and displaced people, will also be utilized. Additionally, GBV Safety Audits will be conducted to further assess risks and identify vulnerable women and girls. Besides, the Mobile sexual and reproductive health (SRH) Team will conduct real-time registration of target groups in need of SRH support.

UNICEF

UNICEF's services are a mix of community and household level beneficiaries. For community services, for example, deployment of mobile health teams, or provision of health kits to the district authorities, no beneficiary registration is required ahead of time. The Ministry of Health records user data so UNICEF can understand the number of users, visit purposes, etc. Similarly, mental health and psychosocial support services (MHPSS), water trucking, water and sanitation in institutions and water infrastructure do not require beneficiary registration; services are available for those who need them. For distribution of health kits, this will be prioritized for those staying in accommodation centers. Registration will be coordinated with the government and center officials. Lastly, messaging will be done through community radios, mobile teams or other means and do not require registration.

WFP

The successful implementation of WFP's anticipatory action activities does not require pre-registration of beneficiaries since there is no provision of sector-specific cash or other forms of in-kind assistance outside of temporary accommodation centers. Ahead of the season, as part of its general preparedness measures, WFP regularly updates a list of community leaders who are an important partner in the dissemination of early warning messages. WFP confirmed that ahead of the 2024/25 season, this step was completed.

Ensuring preparedness for a timely implementation

Anticipatory action and early response require a significant level of preparedness to be able to respond quickly and effectively before a shock occurs and during its early stages. This is especially true for sudden-onset shocks. As a result, partners have made investments to enhance their operational readiness and be able to implement their activities without delay.

IOM

Displacement Tracking Matrix (DTM)

DTM enables decision makers and responders to provide populations with better context specific assistance. As part of this framework, IOM will pre-deploy planning, pre-position data collection tools, and deploy enumerators as early response. Deployment planning includes pre-identifying enumerators and data collection teams for immediate deployment and establishing clear communication and reporting structures with the government, internally, and among partners to enable rapid data flow and analysis. Pre-positioning efforts involve updating data collection tools tailored to anticipated disaster impacts, providing these tools and resources to enumerators and partners in targeted areas, and offering training to enumerators and government counterparts. During early response, enumerators are deployed to affected areas to collect preliminary data on population counts and urgent needs. This data is promptly shared with the government, partners, and sectors to inform early response decision-making.

Camp Coordination and Camp Management (CCCM)

CCCM ensures effective coordination and support through information dissemination, deployment of teams, site improvement, and early response activities. Information, education, and communication (IEC) materials are produced and

distributed ahead of cyclone landfall, supported by megaphones or public address systems and the establishment of information points to keep communities informed. CCCM teams are deployed, prioritizing experienced field staff, to conduct site visits, assessments, and referrals, assist affected populations, and support authorities with registration and documentation. Communities are equipped with site improvement tools for preparedness and initial response activities, such as cleaning and organizing. Cash-based interventions, including cash-for-work programs, are implemented to support affected populations, particularly for site cleaning activities. In the early response phase, CCCM teams maintain an on-site presence to assess needs, facilitate multi-sectoral responses, and strengthen Accountability to Affected Populations (AAP) and PSEA. Referral and complaints/feedback mechanisms are also established to enhance responsiveness and community engagement.

Shelter

The Shelter programme targets aid effectively through beneficiary assessments, cash disbursement coordination, and distribution of non-food items (NFI). Eligibility validation is conducted with local governments and communities, focusing on vulnerable groups such as the elderly, people with disabilities, and female-headed households. Cash disbursement systems are prepared for immediate implementation, with clear communication with members of the at-risk and affected populations on timelines, processes, and conditions, supported by feedback mechanisms for accountability. Household needs for shelter NFIs are rapidly assessed in coordination with local authorities, prioritizing vulnerable groups. Pre-positioned NFIs, including tarpaulins and repair kits, are mobilized to high-risk districts. Accessible distribution points are established with local authorities to ensure equitable access. Distributions prioritize at-risk populations and include demonstrations to enhance the proper use of items, maximizing their impact.

UNFPA

As part of its preparedness efforts, UNFPA prepositions emergency supplies in high-risk areas, including emergency tents to ensure the continuity of Sexual and Reproductive Health (SRH) services and care, as well as dignity kits. Through its leadership of the Gender-Based Violence Area of Responsibility (GBV) AoR, UNFPA continues to strengthen coordination mechanisms with government agencies, local partners, and humanitarian clusters.

UNICEF

UNICEF maintains partnerships with a variety of government and NGO (both local and international) partners and has agreements for procurement and transport of goods. Through these agreements, UNICEF is able to quickly jump-start activities to allow for anticipatory actions to be completed.

WFP

For the dissemination of early warning messages, WFP has worked with CENOE to ensure operational readiness of the INGD-led early warning platform. This includes the preparation of message templates and pre-registration of phone numbers of relevant focal points in communities in each of the pilot districts. Furthermore, INGD has established contracts with radios to ensure early warning can also be disseminated through different radio providers.

For evacuation, WFP has supported INGD to map safe evacuation routes and do community-level evacuation simulations ahead of the cyclone season.

For anticipatory food assistance, WFP has worked with INGD to map the capacity and prioritization of temporary accommodation centers in the relevant districts. Furthermore, WFP has mapped and identified retailers that could provide commodity vouchers in the selected districts.

Activities - Summary table

Table 2. Anticipatory Action and Early Response activities by sector and agency

Objective	Sector	Agency	Outcome	Activity	Phase	
					Anticipatory Action	Early Response
Provide early warning messaging	Cross-cutting	IOM, UNFPA, UNICEF, WFP	Communities are aware of appropriate behaviors and available services to protect their lives and livelihoods	Dissemination of general and sector-specific early warning messages to at-risk communities through national government platforms	X	
		IOM, UNICEF		Deployment of community teams to disseminate early warning messages	X	
Support people in temporary accommodation centers	Food security – Food assistance	WFP	Avoid a deterioration of food consumption by people in temporary accommodation centers	Provision of food assistance in temporary accommodation centers to meet food security needs	X	X
	WASH	UNICEF	Ensure adequate WASH services and prevent disease outbreaks	Set up of emergency WASH services (e.g. emergency latrines, solid waste management) and quick refresher training of community hygiene volunteers	X	X
	CCCM	IOM	Ensure adequate conditions for people in evacuation centers	Quick maintenance of temporary accommodation centers, set up of reception and info desks, preparation of entry points for flow monitoring	X	
Provide in-kind assistance	Protection - GBV	UNFPA	Ensure women and girls can maintain their personal hygiene and provide protection from gender-based violence (GBV) including Sexual Exploitation and Abuse (SEA)	Distribution of dignity kits ¹¹	X	X

¹¹ To be distributed to vulnerable women and girls at the household level after the action trigger and in accommodation centers as early response.

	WASH	UNICEF	Ensure adequate WASH services and prevent disease outbreaks	Distribution of hygiene and water treatment products ¹²	X	X
	Shelter	IOM	Ensure people have access to safe shelter	Conditional sector-specific cash support for shelter repairs to households		X
				Distribution of emergency shelter kits and/or tools for shelter reinforcement and/or repairs to households and in accommodation centers	X	X
Facilitate access to services	Protection - GBV	UNFPA	Ensure partners can effectively support prevention and case management of GBV	Provide orientations on the prevention and management of GBV for implementing partners	X	X
	Sexual and Reproductive Health		Ensure continuity of SRH and GBV response services	Set up of emergency SRH tents		X
				Deployment of mobile SRH/GBV teams		X
	CCCM	IOM	Protect at-risk infrastructures at displacement sites	Deployment of CCCM teams to support provision of tools and materials or sector-specific cash to site management committees to strengthen key infrastructures and roads	X	X
	Health	UNICEF	Ensure continued access to health services	Deployment of mobile health teams		X
				Prepositioning and set up of emergency health kits and tents	X	X
	WASH		Ensure adequate WASH services and prevent disease outbreaks	Water trucking		X
				Protect and/or rehabilitate WASH infrastructure in public institutions	X	X
				Protect and/or rehabilitate community WASH infrastructure	X	X

¹² To be distributed in accommodation centers at the household level after the action trigger and to affected households as early response.

	Child protection		Protect children affected by the cyclone	Deployment of MHPSS services and of social workers to facilitate case management	X	X
	Logistics	WFP	Support evacuation of at-risk communities	Deployment of teams, provision of fuel for government vehicles	X	

5.Pre-agreed Financing

CERF

For this anticipatory action and early response framework in Mozambique, the ERC has pre-agreed to allocate *up to* \$6 million from the Central Emergency Response Fund (CERF) if triggers are reached. Further details can be found in the CERF application documents.

CERF will disburse funds once three conditions are met:

- Endorsement by the Humanitarian Coordinator of the framework and the CERF application package; and
- Endorsement by the Emergency Relief Coordinator of the finalized framework as well as the CERF agency project proposals and budgets; and
- Activation of the pre-agreed triggers once the framework is fully approved and operational until the end of the 2025/2026 cyclone season

CERF will disburse funds on a no-regrets basis as soon as the readiness, action or observational trigger is reached. Upon activation of the first of any trigger, CERF will send out approval letters to the relevant agencies and subsequently will disburse all the funds¹³. While a small portion of the fund can be used immediately upon disbursement for readiness activities, the portion of the funding for anticipatory action can only be used if and when an action trigger is reached and the portion of the funding for early response can only be used if and when an observational trigger is reached. The amount of funding for readiness vs action vs early response activities will be clearly defined in the pre-approved project proposals and budgets and communicated in the CERF approval letters. Distinguishing between these cost categories in advance is important given the different potential scenarios:

- If the readiness trigger is activated, only the funding allocated for readiness activities may be used
- If the action trigger is activated, the funding allocated for anticipatory action may be used. All anticipatory activities have to be implemented before landfall (or the government-mandated cut-off time of 6 hours before landfall for field-based activities). Funds not used by this point will remain with agencies until the project end date but cannot be spent unless an observational trigger is reached (see below) or otherwise communicated by the CERF Secretariat. If no additional trigger is reached by the end of the project period, the remaining funds will be reimbursed to CERF.
- If an anticipatory action trigger is followed by an observational trigger¹⁴, all the funding may be used. In case not all AA activities are implemented in time, and the observational trigger is reached, the anticipatory action funding may be used for early response activities as specified in this framework
- If an observational trigger is activated without a prior anticipatory action trigger, all of the funds may be used to implement early response activities
- In case of a readiness trigger without subsequent action and/or observational trigger, or an anticipatory action trigger without a subsequent observational trigger, the remaining funding will remain with agencies until the project end date. OCHA will convene partners to discuss options for the use of the remaining pre-arranged funding in future activations. If no additional trigger is reached by the end of the project period, the remaining funds will be reimbursed to CERF.
- If an action and/or observational trigger is reached without a prior readiness trigger, the readiness funds may also be used.

¹³ While approval letters will be sent out immediately following an activation, the administrative transfer of funds to agencies may be delayed by a few days. To avoid a delay in project implementation, agencies confirm their ability to frontload the resources required to initiate their response until the funding has been received.

¹⁴ While there are two possible observational triggers (based on windspeed and rainfall), agencies may use the full funding for early response if either condition is met.

Further details can be found in the CERF project documents and CERF communications. Any changes to the projects and budgets have to be approved by the CERF Secretariat as per usual practice.

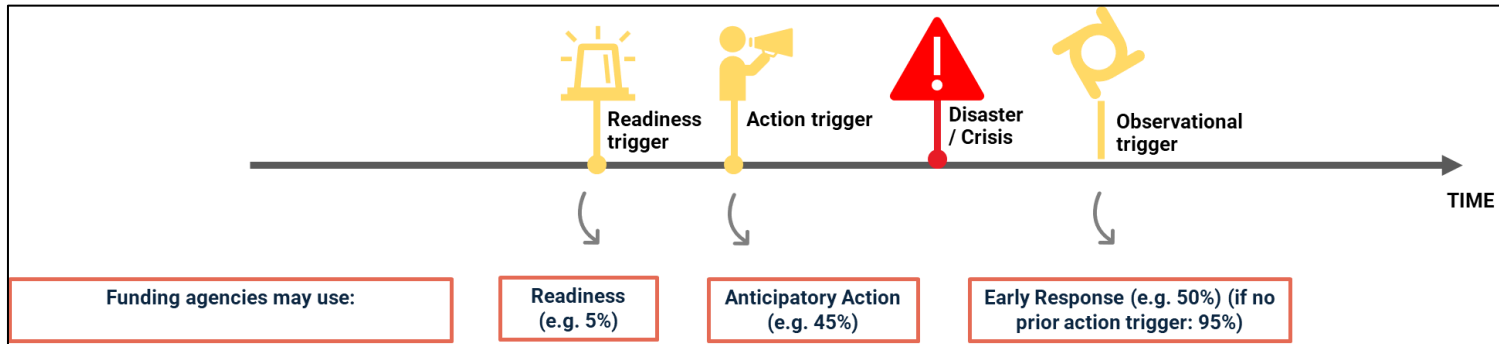

Figure 3. Overview of financing model with examples

Likely scenarios:

Scenario		Situation	Triggers	Use of funds (example)
1	Readiness & AA & ER	Forecasts predict cyclone in AA priority districts; cyclone makes landfall at indicated severe windspeeds (as per trigger thresholds).	All triggers reached (readiness, anticipatory action, early response)	100% use of funds (5% for readiness, 45% for AA, 50% for ER)
2	AA & ER	Later intensification of cyclone, in AA priority districts; cyclone makes landfall at indicated severe windspeeds.	Only action trigger and observational trigger reached (no readiness)	100% use of funds (50% for AA, 50% for ER)
3	ER	Very late intensification of cyclone OR cyclone predicted to hit districts outside of AA priority districts; cyclone makes landfall at indicated severe windspeeds.	Only observational trigger reached (no readiness, no action)	100% use of funds (100% for ER)
4	AA	Forecasts predict cyclone in AA priority districts; cyclone significantly changes direction and does NOT make landfall in Mozambique (false alarm) or at lower threshold	Only readiness and AA trigger reached (no observational trigger)	50% use of funds (5% readiness, 45% action) on no-regrets basis

Complementarity with other donors

This framework for anticipatory action is not limited to CERF-funded activities. UN agencies may provide internal funding in complementarity to increase the scale of this plan depending on availability. Other donors are encouraged to pre-arrange funding to expand the scope of the framework.

The table below summarizes the funding available for this framework, including committed co-financing by agencies.

Table 3. Pre-arranged funding per sector

Sector	CERF funding per sector (in US\$)	Co-financing (in \$US)	Total funding (in US\$)
Food Security	1,580,000	Up to 979,000	Up to 2,559,000
WASH	1,300,000		1,300,000
Shelter	1,250,000		1,250,000
Health	700,000		700,000
SRH	364,000		364,000
CCCM	350,000		350,000
GBV	336,000		336,000
Child protection	100,000		100,000
Logistics	20,000		20,000

Table 4. CERF funding split between AA and ER by agency and sector¹⁵

Agency	Sector	AA	Number of people targeted for AA ¹⁶	ER	Number of people targeted for ER	Total CERF funding per agency
IOM	Shelter/NFI	\$375,000 (30%)	12,500	\$875,000 (70%)	25,000	\$1,600,000
	CCCM	\$140,000 (40%)	160,000	\$210,000 (60%)	160,000	
UNFPA	GBV	\$189,000 (56%)	23,464	\$147,000 (44%)	7,039	\$700,000
	SRH	21,000 (6%)	1,500	343,000 (94%)	21,680	
UNICEF	WASH	\$325,000 (25%)	10,000	\$975,000 (75%)	39,000	\$2,100,000
	Health	\$245,000 (35%)	24,500	\$455,000 (65%)	45,500	
	Child protection	\$35,000 (35%)	3,000	\$65,000 (65%)	9,200	
WFP	Food Security ¹⁷	\$790,000 (50%)	65,000	\$790,000 (50%)	65,000	\$1,600,000
	Logistics	\$20,000 (100%)	-	-	-	
TOTAL		\$2,140,000 (36%)		\$3,860,000 (64%)		\$6,000,000

Considerations

Both the geographical scope and the impact of cyclones are inherently difficult to predict despite the use of the best available scientific data. As a result, it is possible that an event causes or exacerbates existing humanitarian needs despite not formally reaching the thresholds required to utilize the pre-arranged funding. In this case, the RC/HC may request the ERC to make an allocation through CERF's Rapid Response window and use the projects already developed for the present framework, thus reducing the administrative burden for all partners and expediting the release of life-saving funds. This would not affect the amount of funding pre-arranged for this framework. The same applies to situations in which the anticipatory action trigger is reached without a subsequent observational trigger.

In general, having an anticipatory action framework supported by CERF neither precludes (nor guarantees) additional CERF Rapid Response funding to a country for the same or other shocks.

¹⁵ These figures are indicative and do not take into account the readiness costs

¹⁶ Approximate planning figures

¹⁷ Co-financing for food assistance through WFP's internal trust fund will be allocated for anticipatory action only

6. Learning

This framework offers significant opportunities to both generate and apply learning, thus contributing to the overall improvement of humanitarian action in response to sudden-onset shocks. The combination of anticipatory action with early response or the reliance on mainly in-kind and service provision in the absence of multi-purpose cash assistance are just some of the features of this framework that may be explored as part of the learning agenda.

Monitoring and evaluation

Each agency will use its existing monitoring & evaluation systems to collect and track data on implementation progress and outputs achieved. All findings will be shared. In addition, partners have agreed to conduct a joint Post Distribution Monitoring (PDM) in case of a framework activation. All agencies agreed to share beneficiary data, within existing regulations, and commit to providing relevant inputs to support the PDM. The final PDM report along with data will be made available to all framework partners. The PDM will be done in close coordination and communication with participating agencies. In addition, an after-action review will be conducted to gather lessons learned from the development and potential implementation of the framework.

Lessons from other pilots

In addition to generating learning for future frameworks, this framework has applied lessons learned from previous activations in other countries. Among others, these include:

- The integration of an observational component, including a trigger based on rainfall, given the often-unpredictable nature of cyclones
- Broad geographic flexibility
- Allowing for flexibility in the implementation of relevant activities beyond the window of opportunity

7. Validity and future of the framework

The present framework is valid for an initial period of two cyclone seasons (2024/2025 and 2025/2026). The 2024/2025 season will be a pilot phase given that it constitutes the first inter-agency anticipatory action experience for a sudden-onset shock in Mozambique. In the subsequent 2025/2026 cyclone season, lessons learned from both the development and potential implementation of the framework will be applied to enhance and increase the scope of the current framework in collaboration with the national technical working group on anticipatory action. This includes, among other things, potential changes to the trigger mechanism, included sectors and agencies, financing, co-funding, action plan (especially the integration of multi-purpose cash), and geographical scope.

8. Annex

Core principles

Each anticipatory action framework is tailored to the local context. OCHA has identified nine core principles that should apply to the framework in Mozambique:

- **Prioritizing a multi-sectoral approach:** Partners should prioritize multi-sectoral, co-targeted interventions, when possible, to maximize synergies and to achieve great impact.
- **Ensuring the centrality of protection:** In line with the IASC centrality of protection policy, and the principle of “leaving no one behind” (2030 Agenda), all partners implementing anticipatory interventions have the responsibility to ensure that their response will not aggravate the exposure of communities to risks of violence, insecurity, extortion and exploitation. Anticipatory actions must also ensure that they benefit all communities (local communities, displaced communities, returnees, and refugees) based on their needs, with due attention given to obstacles linked to gender, age, disability or social affiliation.
- **Ensuring gender equality is central to inclusive and accountable anticipatory action:** In line with IASC Policy on Gender Equality and the Empowerment of Women and Girls in Humanitarian Action, all partners are responsible and accountable to ensure humanitarian action, including anticipatory action is: rights-based; recognizes gender-based and intersectional needs, as well as potential gender-based discrimination in access to resources and services; facilitate leadership and contribution of crisis-affected women and girls in the planning, implementation, monitoring and evaluation of anticipatory actions and early response, that directly impact their lives and those of their dependents and wider communities.
- **Promoting accountability to affected populations and the Protection from Sexual Exploitation and Abuse (PSEA):** Partners engaged in the implementation of the anticipatory action framework are responsible for the integration of accountability to affected populations approaches in their activities. This includes making all efforts to solicit, hear, and act upon the voices and priorities of affected people (including the most marginalized and at-risk women, men, girls and boys) in a coordinated manner, before, during, and after anticipatory action. It also means ensuring that community feedback leads to corrective action in future anticipatory action.
- **Supporting localization:** All partners involved in the implementation of this framework are expected to honor the HCT’s commitment towards localization. Equitable partnerships with local actors building upon their long-term relationships and trust with communities during anticipatory action are crucial.
- **Engaging in partnerships:** Collaboration across humanitarian actors is key to ensuring that all sectors are engaged, and that assistance is mobilized according to the AA framework.
- **Generating development and climate adaptation co-benefits:** Pilot participants are encouraged to consider how financing for anticipatory action can complement financing for development by reducing suffering and addressing the root causes of problems while supporting adaptation to climate change.
- **Capturing learning:** Monitoring, evaluation and learning activities should be embedded at every phase of the development and implementation of the AA framework.
- **Striving for integration:** The framework seeks to integrate the anticipatory action activities into the existing humanitarian architecture and to foster linkages with long term programming, including resilience and development initiatives.

Evaluation of trigger performance

In order to estimate the performance of the proposed trigger, the historical forecasts have been analyzed in combination with data on past CERF allocations and the available impact data on number of people affected as reported in Figure 4. Despite the data limitations reported in the caption of the figure it is possible to see that the combination of these triggers is able to capture almost all the historical cyclones with the highest number of people affected or for which CERF funding was made available. The main outliers are mainly represented by cyclones only reaching the readiness trigger due to the large uncertainty of the forecasts beyond 72 hours or the observational rainfall data for which the framework allows for an activation to be “stopped” by the RC/HC or the CERF Secretariat as described in the activation protocol.

storm	Readiness	Action	Observational Wind Speed	Observational Rainfall	Total Affected	CERF Allocations
IDAI	True	True	True	True	1,628,167	14,018,121
FREDDY	True	True	False	True	1,143,569	9,995,213
DINEO	False	False	True	False	750,102	2,000,095
GOMBE	True	True	False	True	736,015	4,018,682
ELOISE	True	True	True	False	481,901	
KENNETH	False	False	True	True	400,094	9,964,907
JOKWE	False	False	True	False	220,013	548,913
ANA	False	False	False	True	185,429	
FAVIO	False	False	True	False	162,770	1,070,014
CHALANE	True	False	False	False	73,254	
FILIPO	False	False	False	False	50,781

IZILDA	False	False	False	False	7,103	
IRINA	False	False	False	False	4,958	
HARUNA	False	False	False	False		
DELIWE	False	False	False	False		
GUI TO	False	False	False	False		
HELLEN	False	False	False	False		
CHEDZA	False	False	False	False		
DESMOND	False	False	False	True		
GUAMBE	False	False	False	False		
JASMINE	False	False	False	False		

Figure 4. Historical validation of trigger performance. Main data limitations: No forecast data (to evaluate the action trigger) for Jokwe and Favio and no observational wind speed data (for observational wind speed trigger) for Freddy, Gombe, Ana was available when the analysis was performed.

The corresponding return periods for the trigger activation is reported below for each window and for the combined observational triggers. Given that we have separate budgets for AA and ER and the geographical targeting is different an overall return period for AA and ER is not reported.

Table 5. Return periods and data limitations

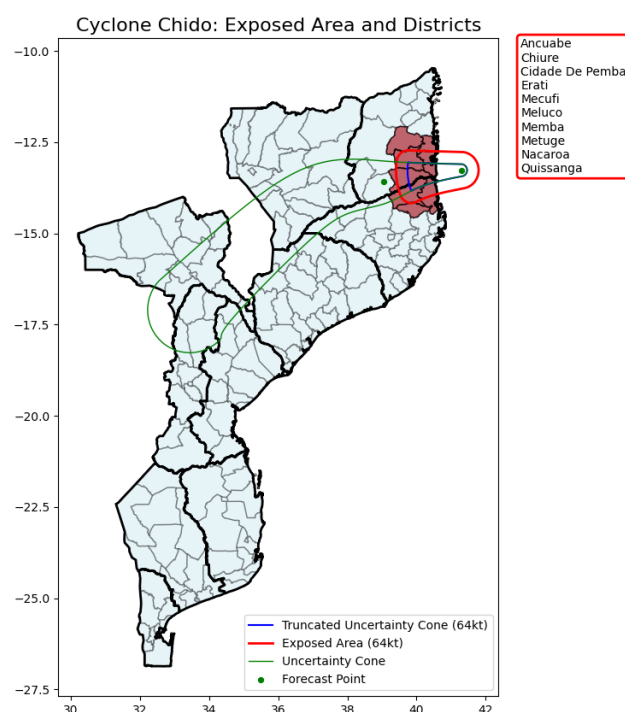

Trigger	Return period (years)	Comment
Readiness	2.3	Some historical forecasts missing
Action	3.5	Some historical forecasts missing
Observational (wind speed)	2.8	Based on historical cyclone tracks
Observational (rainfall)	3.1	Does not include the effect of the 'stop' mechanism
Observational (combined)	Around 2.5	Some data limitations, partial estimation. Also doesn't include the effect of the 'stop' mechanism

Trigger Monitoring Methodology

The exposed area is determined based on the forecast using the cone of uncertainty, accounting for the uncertainty in location, and the wind contours.

- Using the uncertainty cone and the forecasted center of the storm, the exposed area is calculated based on the wind speed at each forecast point and extends inland only as far as the storm's intensity meets the respective thresholds. The uncertainty cone is truncated at points where the storm intensity drops below the threshold, with interpolation between forecast points ensuring a smooth representation of wind speeds. Additional buffers are applied around the truncated uncertainty cone based on the maximum wind contour for the threshold at each point.
- For the action trigger, two thresholds are applied, resulting in two exposed areas: one for severe tropical storms and another for tropical cyclones.
- For the observational trigger, only the tropical cyclone threshold is used, resulting in one exposed area.

An example for the observational trigger is included below:

Draft activation messages

READINESS TRIGGER

Subject: Activation of Anticipatory Action framework for Cyclones in Mozambique: Readiness Trigger Threshold Reached

Dear Resident and Humanitarian Coordinator,

Dear Partners,

The readiness trigger threshold for the OCHA-facilitated anticipatory action framework for cyclones in Mozambique has now been reached. According to Meteo-France La Reunion forecasts, Cyclone XXX is expected to impact the pilot districts of XXX in XXX province with intensity of a severe tropical storm and pilot districts XXX in XXX province with intensity of a tropical cyclone.

Partners are requested to immediately commence the planned readiness activities in these pilot districts as outlined in the endorsed framework.

Further updates will be provided as relevant.

If you have any questions regarding the monitoring or evaluation process or require additional support, please reach out to Sergio Dinoi at dinoi@un.org or Ioannis Kaffes at ioannis.kaffes@un.org.

For more information, you can refer to the anticipatory action framework here: [link]

Thank you for your continued commitment to anticipatory action.

Best regards,

OCHA Centre for Humanitarian Data

ACTION TRIGGER

AUTOMATED EMAIL BASED ON THE FORECASTS

Mozambique Cyclones: Action Trigger Monitoring

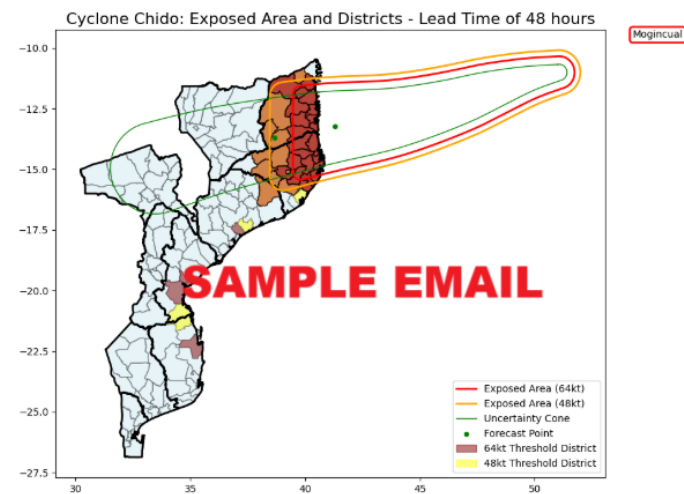

This is an automated message produced by the OCHA Centre for Humanitarian Data for the Mozambique Cyclone Anticipatory Action Framework.

Action Trigger Monitoring

Dear colleagues,

Please find the status of the OCHA-facilitated anticipatory action framework for cyclones in Mozambique below.

ACTION TRIGGER: ACTIVATED

Thank you for your continued commitment to anticipatory action.

Further Details

For more details on the Anticipatory Action framework for cyclones in Mozambique, please refer to the [Framework Document](#).

BEFORE INGD CONFIRMATION

Subject: Anticipatory Action framework for Cyclones in Mozambique: Action Trigger Threshold Reached (framework not yet activated)

Dear Resident and Humanitarian Coordinator,

Dear Colleagues of the Instituto Nacional de Meteorologia (INAM) and the Instituto Nacional de Gestão e Redução do Risco de Desastres (INGD),

Dear Partners,

The action trigger threshold for the OCHA-facilitated anticipatory action framework for cyclones in Mozambique has now been reached. According to Meteo-France La Reunion forecasts, Cyclone XXX is expected to impact the pilot districts of XXX in XXX province with intensity of a severe tropical storm and pilot districts XXX in XXX province with intensity of a tropical cyclone.

Please note that the framework is **not yet activated**. The activation protocol requires INAM to confirm the trigger and the Technical Committee on Disaster Management (CTGD) to be convened to confirm the activation. A follow-up email will be sent once the framework has been activated.

If you have any questions regarding the monitoring or evaluation process or require additional support, please reach out to Sergio Dinoi at dinoi@un.org or Ioannis Kaffes at ioannis.kaffes@un.org.

For more information, you can refer to the anticipatory action framework here: [\[link\]](#)

Thank you for your continued commitment to anticipatory action.

Best regards,

OCHA Centre for Humanitarian Data

AFTER INGD CONFIRMATION

Subject: Activation of Anticipatory Action framework for Cyclones in Mozambique: Action Trigger Threshold Reached (framework activated)

Dear Resident and Humanitarian Coordinator,

Dear Colleagues of the Instituto Nacional de Meteorologia (INAM) and the Instituto Nacional de Gestão e Redução do Risco de Desastres (INGD),

Dear Partners,

The action trigger threshold for the OCHA-facilitated anticipatory action framework for cyclones in Mozambique has now been reached. According to Meteo-France La Reunion forecasts, Cyclone XXX is expected to impact the pilot districts of XXX in XXX province with intensity of a severe tropical storm and pilot districts XXX in XXX province with intensity of a tropical cyclone. **The Technical Committee on Disaster Management (CTGD) was convened and has confirmed the activation.**

Partners are requested to immediately commence the planned anticipatory activities in these pilot districts as outlined in the endorsed framework.

Further updates will be provided as relevant.

If you have any questions regarding the monitoring or evaluation process or require additional support, please reach out to Sergio Dinoi at dinoi@un.org or Ioannis Kaffes at ioannis.kaffes@un.org.

For more information, you can refer to the anticipatory action framework here: [\[link\]](#)

Thank you for your continued commitment to anticipatory action.

Best regards,

OCHA Centre for Humanitarian Data

OBSERVATIONAL TRIGGER

Subject: Activation of Anticipatory Action framework for Cyclones in Mozambique: Observational Trigger Threshold Reached

Dear Resident and Humanitarian Coordinator,

Dear Partners,

The observational trigger threshold for the OCHA-facilitated anticipatory action framework for cyclones in Mozambique has now been reached. According to Meteo-France La Reunion forecasts, Cyclone XXX is expected to impact districts XXX in XXX province with intensity of a tropical cyclone OR rainfall in provinces XXX has exceeded the 120mm threshold.

Partners are requested to immediately commence the planned early response activities as outlined in the endorsed framework.

If you have any questions regarding the monitoring or evaluation process or require additional support, please reach out to Sergio Dinoi at dinoi@un.org or Ioannis Kaffes at ioannis.kaffes@un.org.

Further updates will be provided as relevant.

For more information, you can refer to the anticipatory action framework here: [\[link\]](#)

Thank you for your continued commitment to anticipatory action.

Best regards,

OCHA Centre for Humanitarian Data
